

ALMA Archive & Data Products— what to expect after your observations are made

Authors: Sarah Wood, Erica Keller, Catarina Ubach

Atacama Large Millimeter/submillimeter Array
Expanded Very Large Array

The Condensed Version

- Download data from *Archive Query* and *Request Handler* tools on the ALMA Science Portal
- Data delivered after passing Quality Assurance (QA)
- The Pipeline Weblog—Calibration and Imaging Information
- Delivered data include:
 - Calibration tables and diagnostics
 - Preliminary images (better products may be possible with more careful continuum & non-default cleaning parameters)
- Project tracking – SnooPI

This talk will be available online for reference after this workshop.

Exploring the ALMA Archive

- All projects should start with the ALMA Archive
- Check for duplications
 - Same Target
 - Angular resolution is within a factor of 2
 - RMS is better by a factor of 2
 - See Appendix A of the Users' Policies for complete definition
- Use archival data! No need to apply!
- New archive interface
 - <http://almascience.nrao.edu/asax/>

QA2 Data Products Package: Directory Structure

After un-tarring the processed data we have a directory tree:

Science goal

Project code

```
2016.1.00164.S
├── science_goal.uid__A001_X87a_X9fa
│   ├── group.uid__A001_X87a_X9fb
│   │   └── member.uid A001_X87a_X9fe
```

Group OUS:
combination of
member OUS's

```
├── calibration
├── log
├── product
├── qa
└── script
```

Member OUS: may
contain 12-m array,
ALMA Compact Array
(ACA), or Total Power
observation

Data delivery products...

QA2 Data Products Package: The QA2 Report (previously README)

Different format before Cycle 5

```
| -- member.uid__A001_X1299_X39.README.txt
```

Cycle 0-4

Project code: 2015.1.02572.S
PI name: Bob Hops
Project title: A first look at Space
Configuration: 0.241 km
Proposed rms:
Proposed beam size: 3.44"
CASA version: 4.7.2
Comments from Reducer:
This scheduling block was manually calibrated and imaged.
Several antennas were flagged for particularly high Tsys.
Continuum images were produced using scriptForImaging.py. They include the entire bandwidth.
Continuum:
Beam= 4.33" by 2.59"
RMS = 5.0 Jy/Beam over 7.5 GHz bandwidth

Cycle 5-Now

Details about the quality of the data processing are in

qa/member.uid__A001_X135e_X8f.qa2_report.pdf (or html)

Details about the processing are in

qa/*weblog.tgz

Details about the quality of the raw data are in

qa/*qa0_report.pdf (or html)

SnooPI Access

PI's and Co-I's can download the AQUA quality report for Cycle 5+ observations from SnooPI using the following URL...

<https://asa.alma.cl/snoopi>

Goals of Quality Assurance (QA) Process

- Ensure reliable final data product
 - Desired sensitivity (as specified by PI)
 - Desired resolution (as specified by PI)
- Ensure calibration and QA imaging free from major artifacts
- Warning: Errors in PI-supplied parameters are outside scope of QA process, including:
 - Incorrect source coordinates
 - Inadequate frequency specification
 - Inadequate sensitivity limits

See [ALMA Technical Handbook](#) for details.

During Observations – QA0

- Monitoring of on-the-fly calibration and system performance
- Rapidly-varying parameters (~SB/EB timescales)
 - Atmospheric effects
 - Antenna issues
 - Front-end issues
 - Connectivity issues
 - Back-end issues
- Tolerances for each are explicitly laid out
 - No fewer than 34 antennas in 12m array
 - Bandpass calibrator is strong enough
- Quick reduction may be run to check flux measurements and phase stability

QA0 Report

QA0 Report

Project Code	2016.1.00164.S
Session	uid://A001/X87a/X9fe
SchedBlock	uid://A001/X87a/X9e2 (M83_a_06_7M)

# Antennas	10 (90.0 % for Cycle 4)
Array	7 [m]
Baselines	8m -- 48m
Band	ALMA_RB_06
Weather	null
Atmosphere	Tsys (Min/Avg/Max) : 78.6/84.9/96.9 Trec (Min/Avg/Max) : 29.4/41.6/56.6

Final QA0 comment

```

=== QA0 summary for id__A002_Xb8e961_X4eea ===
| Usable antennas: 9
| Phase rms (Antenna,phaseCal): 5.9 deg (=21.1um)
| Baseline limit with good phase: 5078m. Longest baselines (80%): 34m.
| No online WVR-corrected data available: assuming correction factor of 1.0 in above
| Bandpass cal: J1517-2422 flux: 3.25 Jy
| Phase cal: J1351-2912 flux: 0.201 +/- 0.004 Jy
| Number of cycles of science/phaseCal: 8
| Band observed: 6 Highest recommended: 10-10 based only on phase rms
| QA0 PASS
| no significant problems
== == == == == == == == == == == ==

```

Between Observations – QA I

- “Regular array maintenance” timescales
- Slowly Varying Parameters (~MOUS timescales)
- General array calibration
 - Baseline measurements
 - Delays
- Antenna Calibrations
 - All-sky pointing
 - Focus curves
 - Beam patterns, etc.
- Observatory Calibrator Surveys
 - Solar-system and quasar flux monitoring

After Observations – QA2

- Calibration by pipeline (~70%) or DA/staff.
- Final QA checks include
 - RMS of complex antenna-based gains
 - Absolute flux calibration scale
 - T_{sys} within acceptable range
 - Proper phase transfer cadence
 - Proper bandpass corrections
- Assessment of Imaging Products
 - Signal-to-noise and angular resolution
 - No strong artifacts
 - Performed on the reference source/spectra
- Information about QA review is aggregated for delivery in the QA2 Report

The QA2 Report:

QA2 Report

Final QA2 comment

Comments from Reducer

CASA version: 5.4.0-70, Pipeline:42254M (Pipeline-CASA54-P1-B)

Reduction mode: PL calibration and imaging

Calibration issues: None.

Imaging issues:

This SB has been reprocessed with CASA 5.4.0 due to the issues in previous versions of CASA described at the following links:

See the "Imaging" section at: <https://casa.nrao.edu/casadocs/casa-5.4.0> <<https://casa.nrao.edu/casadocs/casa-5.4.0>>

After Delivery – QA3

- Additional QA stage possibly triggered by PI reporting any issues underlying:
 - Data, observing procedure, calibration
- Re-evaluation of calibrated data products
 - Only occurs if QA0 → QA2 miss something
- Likely results in fix being implemented and products re-ingested into ALMA archive
- Reported within 2 months of delivery
 - Full 12 month proprietary extension after fix delivered
- Reported more than 2 months after delivery
 - Remaining proprietary period extended after fix delivered

Data Delivered Problem Reported 5 months later Fix Delivered New End of Proprietary Period 7 months after Fix Delivered

Open the Weblog

- Run the command:

```
tar -xvzf member.uid__A001_X87a_X9fe.hifa_calimage.weblog.tgz
```

- Open `pipeline-20190312T041124/html/index.html` in a browser (recommend using Firefox)
- Note: If using Firefox version ≥ 68.0 , open `about:config` and change "privacy.file_unique_origin" property to false
- Coming later this year – Weblog will be viewable through SnooPI!

Run scriptForPI.py to restore calibration

Restoring calibrated measurement set: scriptForPI

- <https://help.almascience.org/kb/articles/how-do-i-obtain-a-file-of-calibrated-visibility-measurement-set-for-alma-data>
- Recommend using same CASA version used in processing
- But if you do want to use a newer version, inspect the measurement set carefully to make sure flags were applied correctly.
- A few known issues are posted here:
 - <https://help.almascience.org/kb/articles/why-does-scriptforpi-py-crash-with-the-error-no-such-file-or-directory-rawdata-uid-a002-x12345>
 - <https://help.almascience.org/kb/articles/why-does-scriptforpi-py-crash-with-nameerror-name-hif-restoredata-is-not-defined>

Restoring calibrated measurement set: scriptForPI

- <https://help.almascience.org/kb/articles/how-do-i-obtain-a-file-of-calibrated-visibility-measurement-set-for-almadata>
- cd into script directory
- Start the correct version of casa (casa --pipeline for PL tasks)
- Run scriptForPI.py (with spacesaving options, if needed) –
execfile('*scriptForPI.py')

```
cd script
```

```
casa -c "SPACESAVING=N; execfile('scriptForPI.py')"
```

where N is an integer from 0 to 3 with the following meaning:

SPACESAVING	= 0	same as not set (all intermediate MSs are kept)
	= 1	do not keep intermediate MSs named *.ms.split
	= 2	do not keep intermediate MSs named *.ms and *.ms.split
	>= 3	do not keep intermediate MSs named *.ms, *.ms.split, and *.ms.split.cal (if possible)
	= -1	do not check disk space

Restoring calibrated measurement sets: scriptForPI - PL calibration + imaging

```
2020-06-11 16:57:33 INFO: Selecting representative target source 520412 for data set uid___A002_Xe20b32_X84e7.ms
2020-06-11 16:57:33 INFO: Selecting representative target source 520412 for data set uid___A002_Xe20b32_X84e7.ms

member.uid__A001_X131c_X167.cal.product_rename.txt
```

Pipeline Image Reprocessing

- Pipeline images are quality assessed but may not be science ready
 - All sources/spws may not be imaged
 - Change continuum selection
 - Change weighting, channel width, automasking, etc.
- See https://casaguides.nrao.edu/index.php/ALMA_Imaging_Pipeline_Reprocessing
- Automasking Guide https://casaguides.nrao.edu/index.php/Automasking_Guide
- Manual imaging template available at: https://casaguides.nrao.edu/index.php/ALMA_Imaging_Pipeline_Reprocessing_for_Manually_Calibrated_Data

Current SRDP capabilities for ALMA

Data

- Accessible via the NRAO archive interface (data.nrao.edu)
- ALMA Calibrated Measurement set download
 - Cycle 5 data and beyond: subject to proprietary periods
 - only available for data calibrated by pipeline (no manual reductions)
- ALMA User-Defined Imaging
 - Generate datacube with a custom spectral axis from a pipeline-reduced dataset
 - User-defined spectral width of cube
 - Velocity or frequency definitions supported
 - Channel averaging
 - Angular resolution modification (higher or lower resolution). This is limited by what data will allow, one may not exactly get their requested resolution.

OTHER CONSIDERATIONS FOR THE PI

Data Delivery Email

- Sent when an individual MOUS passes QA2
- Data are ingested into the archive and made available at all Regional Centers
- Triggers Start of Proprietary Period
 - Usually 12 months
- Only Sent to PI
- Includes information on:
 - Downloading data
 - Proprietary period
 - Available support
 - Publication requirements

Data Delivery Email –ADDED VALUE!

- NA PIs get two delivery emails
 1. From JAO with links:
 - Archive query for MOUS package
 2. From NAASC:
 - Fully-calibrated MS (North America Only)
 - Calibration and Imaging Report (Weblog)
 - ALMA Data Mining Toolkit (ADMIT) products¹
 - Knowledgebase Article: “Where can I get additional information for my NA added value data products?”
 - <https://help.almascience.org/kb/articles/where-can-i-get-additional-information-for-my-na-added-value-data-products>

Data Reduction Visitors to the North American ALMA Science Center (NAASC)

by [Dong-Chan Kim](#) — last modified Jan 30, 2013

Data Reduction Visitors are ALMA users coming to NAAASC for a week or less for expert assistance with obtaining the optimum results from their data.

Eligibility

We expect that the majority of short-term visitors to the NAAASC will come for access to NAAASC computing facilities, and for expert assistance with re-processing and analyzing their ALMA data, which is central to the successful interpretation of complex interferometric data sets. To meet this need, the NAAASC runs a visitor program. In some cases short-term visits may be scheduled for assistance with the technical aspects of ALMA proposals or designing scheduling blocks (SBs). Scientists carrying out archival projects may also take advantage of the visitor program.

The NAAASC will provide assistance to up to three visitors from each scheduled or observed project, though funds for travel are more restricted. An experienced investigator must accompany any student who is new to radio interferometry.

ALMA is a partnership of ESO (representing its member states), NSF (USA) and NINS (Japan), together with NRC (Canada), MOST and ASIAA (Taiwan), and KASI (Republic of Korea), in cooperation with the Republic of Chile. ALMA construction and operations are led on behalf of Europe by ESO, on behalf of North America by the National Radio Astronomy Observatory (NRAO), which is managed by Associated Universities, Inc. (AUI), and on behalf of East Asia by the National Astronomical Observatory of Japan (NAOJ). The Joint ALMA Observatory (JAO) provides the unified leadership and management of the construction and operation of ALMA. The Joint ALMA Observatory is operated by ESO, AUI/NRAO and NAOJ.
