

CASA website: download

casa.nrao.edu

Mac

Website: casa.nrao.edu

Releases:

Every ~2 months

But... only some releases

Contain VLA pipeline (~yearly)!

Installation:

- Monolithic (all-inclusive 'plug-and-play')
- Pip-wheel (Pythonic, Jupyter Notebooks, Google Colab)

Latest version: CASA 6.4

The Release Notes and Known Issues of the 6.4 release are available in ™CASA Docs

CASA 6.4 is based on Python 3, and available either as a downloadable tar-file distribution with Python environment included, or as a modular version that can be installed with pip-wheels.

Manual processing can be done with any CASA version, but ALMA and VLA pipelines may differ and are not always included, so download the correct CASA version for pipeline use.

Linuv

	(RedHat 6, 7, 8)	(OS 11, OSX 10.14, 10.15)
General Use (<u>(Notes)</u>	CASA 6.4.0 (RH7/8 - Py 3.8) CASA 6.4.0 (RH7/8 - Py 3.6)	CASA 6.4.0 (OS11 - Py 3.8) CASA 6.4.0 (OS11 - Py 3.6) CASA 6.4.0 (10.15 - Py 3.8) CASA 6.4.0 (10.15 - Py 3.6)
ALMA Pipeline	CASA 6.2.1 (RH6/7)	<u>CASA 6.2.1</u> (10.15) <u>CASA 6.2.1</u> (10.14)
VLA Pipeline	<u>CASA 6.2.1</u> (RH6/7)	CASA 6.2.1 (10.15) CASA 6.2.1 (10.14)

The above CASA versions can also be downloaded from our NAOJ CASA mirror site and NAOJ CASA-pipeline mirror site, or via Google Drive.

CASA 6: pip-wheel installation

CASA 6 can optionally be installed through modular pip-wheels, with the flexibility to build CASA tools and tasks into a customized Python environment. Instructions on how to install the pip-wheel version of CASA 6 can be found in CASA Docs: <u>CASA 6 Installation and Usage</u>

The modular pip-wheel version is not yet used in production by ALMA and VLA, and does not include any pipelines.

Common Astronomy Software Applications

CASA, the Common Astronomy Software Applications, is the primary data processing software for the Atacama Large Millimeter/submillimeter Array (ALMA) and Karl G. Jansky Very Large Array (VLA), and is often used also for other radio telescopes.

6.4.0 Release

CASA 6.4.0 can now be (downloaded) for general use. CASA 6.4.0 is available either as a downloadable tar-file, or through pip-wheel installation, which gives flexibility to integrate CASA into a customized Python environment.

Highlights:

- OS Support: CASA now supports RedHat 8, and Mac OS with Python 3.8, for both monolithic and modular versions. Note the Linux tarballs with different Python versions will extract to the same directory name.
- plotcal/plotms: Funtionality for plotcal has been migrated to plotms, and plotcal was deprecated.
- plotms: calibration table averaging with channel selection is now supported.
- fringefit: memory usage of fringefit has been reduced, allowing larger datasets to be processed.
- imhead: updated to display microsecond precision.
- caltables: the storage of frequency meta information in caltables improved, making certain frequencydependent calibration solutions more accurate.
- sdintimaging: now adds information to the history of produced images
- T+dT timerange selection improved in accuracy.

CASA highlights (VLA/VLBA)

CASA releases 6.3/6.4

- Flagging: flagdata with time / channel averaging
- Calibration: phaseshift, new task for changing phase center
- Imaging: tclean handles mixed polarization setups; interactive tclean works in parallel mode; improvements savemodel step
- Plotting: plotcal functionality → plotms; caltable averaging with channel selection
- VLBA: Fringefit to handle large data sets; smoothing caltables produced by accor
- Large number of Bug fixes

New CASA release 6.4.4 release → next week (March 2022)
